

PRESS RELEASE

EUROSUNMED organizes an International School and Workshop: “State of the Art on Renewable Electricity Generation”, on 7-11 April 2014 in Rabat (Morocco)

In the frame of the **EUROSUNMED** project, supported by the FP7 Programme of the European Commission, an *International School and Workshop on Photovoltaics, Concentrated Solar Power, Storage and Grid Integration* are organized from 7 to 11 April 2014 in Rabat (Morocco). These events will be hosted by the Moroccan Foundation for Advanced Science, Innovation and Research (MAScIR).

The call for the events closed in Mid-February and more than 350 applications were received. The organizers hope to welcome at least 200 students, researchers and professors working in the area of renewable energies in the MENA, EU and beyond.

The opening session of the event will give the opportunity to authorities and participating organizations to share their views on the development of renewable energies in the Mediterranean region. The event will continue four days with numerous sessions for early-stage and experienced researchers, that cover a variety of topics from photovoltaics, concentrated solar power, thermal & electrical storage systems to connecting electrical grid. The event will end with a one-day Workshop with keynote speakers capturing the latest developments in the area of renewable electricity generation. The Workshop is organized in collaboration with REELCOOP (Research Cooperation in Renewable Energy Technologies for Electricity Generation). All lectures will be delivered in English.

For more information, please link to www.eurosunmed.eu. All presentations will be available online some weeks after the event.
